Office Action Summary	Application No.	Applicant(s)	
	10/735,050	ATKIN ET AL.	
	Examiner	Art Unit	
	John J. Wilson	3732	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 15 November 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-28 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-28 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rahman et al (6716028) in view of Cook et al (6623500). Rahman shows a hand piece 82, Figs. 11A-11D, for a transducer 14, a body 82b rotatably receiving a transducer, rotator head 80a engaging the transducer for rotation, means 80b for rotatably coupling the body 82b to the rotator head 80a. Rahman does not show a rotor head that envelops at least a portion of the body. Cook shows an ultrasonic tool including a rotator head 200 that envelops at least a portion of a body 150. It would be obvious to one of ordinary skill in the art to modify Rahman to include locating the elements in reverse orientation so that the rotator head is on the outside as shown by Cook in that a mere reversal of the location of known elements is within the level of a skilled artisan.

Claims 1-4, 13, 14, 16-19 and 21-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rahman et al (6716028) in view of Novak (6012922) and Cook et al (6623500). Rahman shows a hand piece 82, Figs. 11A-11D, for a transducer 14, a body 82b rotatably receiving a transducer, rotator head 80a that is coupled to the body 82b by fingers 80f so that the rotator head 80a along with the transducer insert will

rotate with respect to the body 82b. The shown coupling means of Rahman is not in the form of a ring. Novak teaches a rotatably connected rotator head 14 on body 15 and shows using a retainer ring 18, Figs. 2 and 5, to enable the relative rotation. It would be obvious to one of ordinary skill in the art to modify Rahman to include using a ring coupling means as shown by Novak in order to make use of known alternatives in the art for allowing elements to rotate with respect to each other. The above combination does not show a rotor head that envelops at least a portion of the body. Cook shows an ultrasonic tool including a rotator head 200 that envelops at least a portion of a body 150. It would be obvious to one of ordinary skill in the art to modify the above combination to include locating the elements in reverse orientation so that the rotator head is on the outside as shown by Cook in that a mere reversal of the location of known elements is within the level of a skilled artisan. As to claim 2, to use a metal ring is an obvious matter of choice in known materials used of coupling rings to the skilled artisan. As to claims 3 and 4, the location of the groove is an obvious matter of choice in the reversal of the location of known elements to one of ordinary skill in the art. As to claims 13 and 14, see column 1, line 33, of Rahman. As to claim 17, see coil, column 2, line 45 of Rahman. As to claim 18, see electric and fluid source, column 1, lines 25-30, of Rahman. As to claims 21 and 22, see nickel plates, column 1, line 42, of Rahman. As to claim 24, the rotation of the insert inherently applies a force to 80a, and as such, turning requires a force to the rotator head.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rahman et al (6716028) in view of Novak (6012922) and Cook et al (6623500) as applied to claim 1 above, and further in view of Coss et al (5655906). The above combination does not show using a plurality of grooves, claim 5, and slots, claim 6. Coss shows a plurality of grooves and slots as shown on the body 10 in Fig. 1. It would be obvious to one of ordinary skill in the art to modify the above combination to include grooves and slots as shown by Coss in order to improve the grip. That these structures may be used to mount a lock and hand grip is merely intended use, all the actual structure being shown, the intended use with inferentially claimed elements is not given patentable weight.

Claims 7-10, 20 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rahman et al (6716028) in view of Novak (6012922) and Cook et al (6623500) as applied to claim 1 above, and further in view of Carmona et al (3654502). As to claim 7, Rahman teaches use of a coil is known, however, does not specifically show a coil in the embodiments, and as to claim 8, does not show a coil mounted on a bobbin, and as to claim 9, does not show a sealing O-ring, and as to claim 10, does not show a cavity through the bobbin for fluid. Carmona teaches a coil 36, bobbin 16, O-ring 30 and fluid 66 within the bobbin. It would be obvious to one of ordinary skill in the art to modify the above combination to include the structures shown by Carmona in order to make use of known ways in the art to better mount a coil and provide fluid flow.

Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rahman et al (6716028) in view of Novak (6012922), Cook et al (6623500) and Carmona et al (3654502) as applied to claim 8 above, and further in view of Paschke et al (5395240). The above combination does not show a connection member that uses a connection plug pin. Paschke teaches using a plug pin, Figs. 1-3 and elements 27-29 in Fig. 5. It would be obvious to one of ordinary skill in the art to modify the above combination to include a coupling including pin connectors as shown by Paschke in order to releasably connect the hand tool to electric and fluid sources.

Response to Arguments

Applicant's arguments filed November 15, 2006 have been fully considered but they are not persuasive. Applicant's remarks are held to be moot in view of the newly applied reference to Cook as detailed above.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 3732

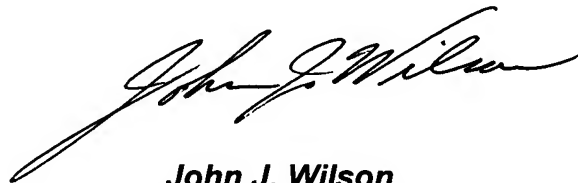

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John J. Wilson whose telephone number is 571-272-4722). The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez, can be reached at 571-272-4964. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 3732

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

A handwritten signature in black ink, appearing to read "John J. Wilson". The signature is fluid and cursive, with a long, sweeping underline that extends to the left.
